

Nanogel Bandage

In the future, new nanomaterials could help heal burns, cuts, and scrapes faster and better.

Nano Body Armor

Tiny nanoparticles could make any treated fabric super strong. Imagine a soft shirt that would protect you from falls or crash landings.

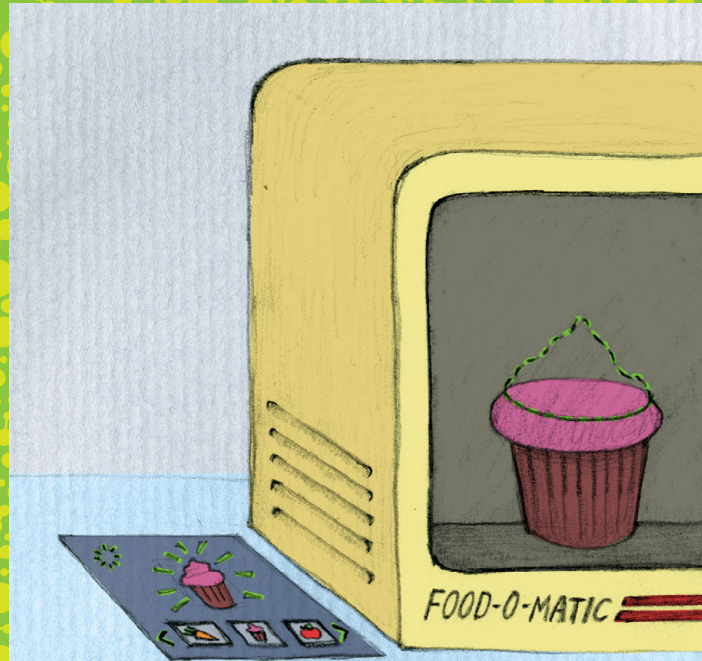

Hovercraft

In the future, nanotechnology could allow us to build longer flying, less expensive hovercrafts.

Flying Car

Nanotechnology allows us to create new materials and technologies. Imagine a future where everyone could have a flying car.

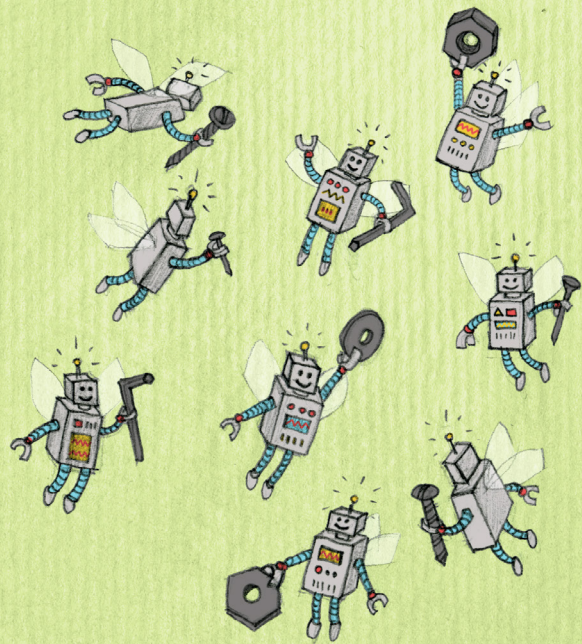

Food-o-matic 3000

In the future, a food printer could use nanotechnology to assemble your meal atom-by-atom with just the press of a button.

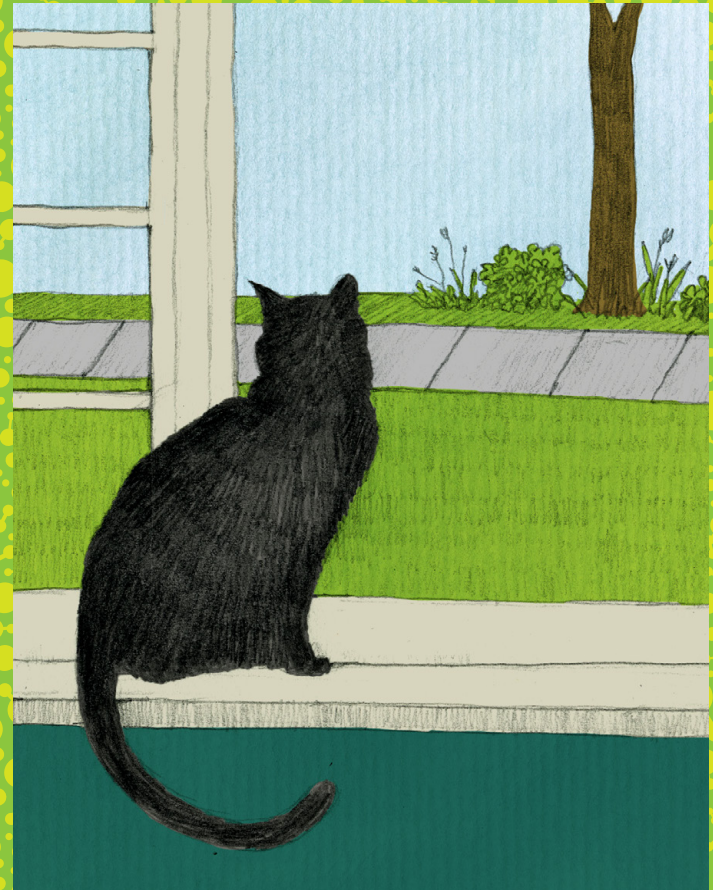

Solar Bracelet

In the future, new nanomaterials could make smaller, less expensive, flexible solar panels that help charge on the go.

Mini-Robots

In the future, nanotechnology could help make tiny robots that fly around gathering information or helping with everyday tasks.
