View a solar eclipse safely with this card!

Use the hole in this card to project an image of the sun onto a flat, light colored surface.

It is never safe to look directly at the sun's rays, even if the sun is partly blocked. During the short time when the moon completely blocks the sun—known as the period of totality—it is safe to look directly at the sun. Otherwise you need to use a filter, such as special eclipse glasses or #14 welder's glass. Or you can use this card to create a pinhole projection of the eclipse.
