

Ready, Set, Fizz

Setting up the experiment

Set up the materials this way each time:

Tip: Instructions for doing and observing the experiment are on a separate sheet.

1

Pour 20 ml of water from the pitcher into each measuring cup.

2

Remove one tablet from its wrapper. Break it in half, and drop it into one of the tubes.

Keep the other tablet in its wrapper. Break it into many small pieces, then open the wrapper and empty out the pieces into the other tube.

3

Now, invite participants to pour the water into the tubes at the same time.

Tip: After the experiment, you'll need to dump the contents of the tubes into a sink or waste container. If possible, let the tubes dry out a bit between groups.
