

# Ancestral Astronomy

**1** Wrap a piece of foil around a cardstock circle to create a medallion. Try to keep the foil as smooth as possible on the front side.

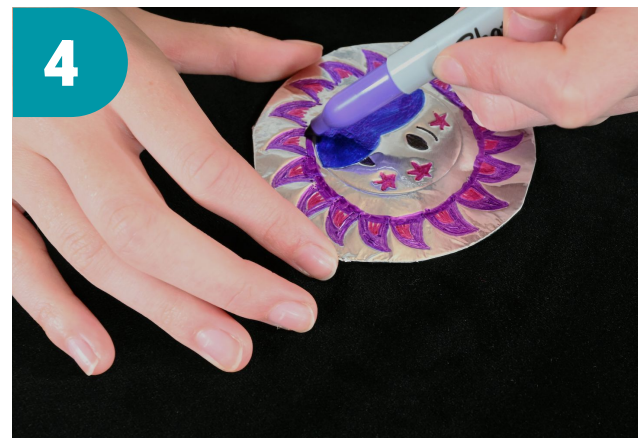

**2** Choose or create a design that incorporates things you can observe in the sky.

**3** Now engrave your design into the foil. You can draw freehand, trace over an image, or use stencils.

**Tip:** Press gently with the tool so you don't rip the foil.

**4** If you like, you can use markers to color your design. You can also punch a hole and hang your medallion from a piece of yarn.
