

# EXPLORING THE SOLAR SYSTEM

## Design, Build, Test

---

### Try this!

**Build a container.** You'll need a container to hold all of the tools required for a successful mission.

**Add tools.** You'll need tools from these four categories: power, communication, navigation, and science.

**Test your spacecraft.** Use the test stations to see if your spacecraft is strong enough for launch and space travel. *Did it stay together? Or is it time to redesign?*
